DETAILED ACTION

Receipt of amendment and response dated 1-8-07 is acknowledged.

Claims 1-3, 7-9 and 25 are pending in the instant application.

Response to Arguments

Applicant's arguments with respect to claims 1-3, 7-9 and 25 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 2 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 122523 (EP, abstract).

EP teaches intermediate compounds for the preparation of azo compounds comprising benzenediol compounds, comprising 1,3-benzenediol, 2-(4-morpholinomethyl) compounds, which reads on instant claimed compounds. The above compound is listed on page 37, line 1. Hence EP anticipates instant claims.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 3, 7-9 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP122523 (EP) in view of Emilsson et al (European J. of medicinal Chemistry, cited in the last action)

EP teaches intermediate compounds for the preparation of azo compounds comprising benzenediol compounds, comprising 1,3-benzenediol, 2-(4-morpholinomethyl) compounds. Further EP teaches that the coupling compound is the Mannich reaction product of formaldehyde, resorcinol and an organic amine. Thus EP teaches the claimed reaction with a resorcinol instead of dimethoxybenzaldehyde.

The abstract of Emilsson shows reaction between 2,6-dimethoxybenzaldehyde with an amine. Examiner notes that the compound 2 of instant claim 7 is not a 2,5-dimethoxy-benzaldehyde and instead is a 2,6-dimethoxy-benzaldehyde.

Emilsson does not teach the same amine employed in the instant claimed reaction.

It would have been obvious for one of an ordinary skill in the art at the time of the instant invention to employ a resorcinol or a dimethoxybenzaldehyde compound of Emilsson and still result in the of 1,3-benzenediol, 2-(4-morpholinomethyl) of EP because while EP shows preparation without the step of deprotection, Emilsson shows that that the starting materials can be dimethoxybenzaldehyde and further the instant reactants and the step of deprotection is not novel. In re Durden, 763 F.2d 1406, 226 USPQ 359. One

of an ordinary skill in the art would have expected reasonable success in producing a desired compound.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
